

# ePowerHouse

## The Real-Time Internet Portal to Your Enterprise

### VISIBILITY

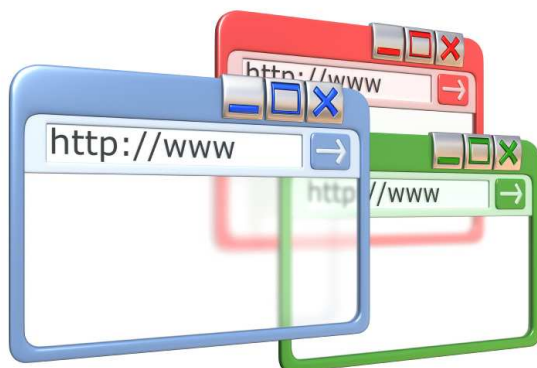

ePowerHouse provides complete business transparency to improve decision making and supply chain efficiency

### COLLABORATION

Enables sharing of crucial warehouse and fulfillment information with trusted partners through a secure interface

### CONTROL

Real-time warehouse metrics and supply chain visibility enables a responsive supply chain and puts you in control

- Provides real-time access to warehouse data to monitor inventories and key performance indicators
- Lets you track the status of expected receipts and order fulfillment productivity throughout your supply chain
- Improves accuracy and customer service by enabling orders and receipts to be entered directly into PowerHouse/WMS
- Supports comprehensive reporting with access to detailed warehouse and inventory data

Virtualization of the supply chain is requiring companies to find ways to access and share increasing amounts of information about the status of their inventory, receipts, shipments, performance metrics and much more. Businesses require tools to enable real-time visibility, collaboration between partners and the ability to control their supply chains more effectively. ePowerHouse is the secure web interface to your PowerHouse/WMS Enterprise that provides the necessary visibility, collaboration and control needed to optimize your supply chain. Because ePowerHouse can be accessed from any internet browser, it is ideal for managers on the move that need to stay informed wherever they are and Third Party Logistics companies whose clients require access to real-time warehouse activities and inventory data.

ePowerHouse is an invaluable tool and a competitive edge for companies in the increasingly technology driven services industry. At home in the 3PL environment, ePowerHouse is the handshake between the client's business and their logistics services provider. With ePowerHouse, 3PL clients have access to inventory data, the status of receipts and orders, warehouses utilization, as well as numerous KPIs. Utilizing rolls based security; users and 3PL clients are granted access to their company's data only, maintaining complete control of proprietary business information.
